Education

Associate of Science in Computer Science

Bunker Hill Community College — Boston, MA

Expected Graduation: August 2026

Technical Skills

Languages: Java, SQL, C++

Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, JWT Authentication

Database: MySQL, AWS RDS, Relational Database Design

Tools: Docker, Git, GitHub, Postman, Swagger, Render

Concepts: Object-Oriented Programming, Data Structures & Algorithms, MVC Architecture, Layered Architecture, Asynchronous Processing, API Design

Projects

Car Rental Management System

GitHub: github.com/JeancarlosG97 | Live: <https://car-rental-ui-s1hb.onrender.com/>

- Designed and developed a Java Spring Boot backend application for managing vehicle inventory, customers, rentals, and authentication workflows.
- Built and documented **21 REST API endpoints** supporting CRUD operations, rental transactions, and user management features.
- Implemented Spring Security with JWT authentication and role-based authorization to secure protected application resources.
- Applied Controller-Service-Repository architecture to improve code organization, maintainability, and separation of concerns.
- Integrated Spring Data JPA and Hibernate with MySQL hosted on AWS RDS for persistent relational data storage.
- Designed entity relationships and database interactions using JPA/Hibernate ORM patterns.
- Containerized the backend application using Docker and deployed the API through Render for cloud accessibility.
- Created API documentation and tested endpoints using Swagger and Postman.

Asynchronous Email Queue System

GitHub: github.com/JeancarlosG97 | Live: async-2ym2.onrender.com

- Developed a Spring Boot application demonstrating asynchronous backend processing through an email queue system.
- Implemented background workers that process queued email jobs on scheduled intervals, separating API requests from long-running operations.
- Created REST APIs for submitting email jobs and tracking processing states from PENDING to SENT.
- Used Spring Data JPA and MySQL to persist job data and maintain reliable processing state across application restarts.
- Applied asynchronous programming concepts to simulate enterprise-style background processing and job queue systems.

Experience

Guest Service Representative

W Hotels — Boston, MA

- Provided high-level customer service in a fast-paced luxury hospitality environment requiring strong communication and problem-solving skills.
- Resolved guest issues efficiently while maintaining professionalism and attention to detail.
- Collaborated with multiple departments to coordinate daily operations and improve service delivery.
- Managed multiple priorities in a high-pressure environment while maintaining exceptional guest satisfaction.
